Profile Summary

Master of Science in Computer Engineering graduate from KTH Royal Institute of Technology with several years of software development experience. Strong foundation in software engineering principles, with a special interest in Data Science and Machine Learning. Currently working for Saab Aeronautics on Gripen software.

Education

Master of Science in Computer Engineering (Civilingenjör Datateknik)
KTH Royal Institute of Technology 2019 - 2024

- **Master's thesis: Football shot detection using convolutional neural networks** Together with Football Analytics Sweden I researched convolutional neural networks and their ability to detect shots in football video data. The work was done in Python using the latest computer vision technologies, such as pre-trained 3D CNNs.
- **Master of Science, Computer Science - Data Science and Machine Learning** 2022 - 2024
  Theoretical and practical courses in the mathematical foundation and application of machine learning models.
- **Bachelor of Science in Engineering - Computer Engineering** 2019 - 2022
  Theoretical courses such as maths, operating systems, and algorithms, along with practical courses in software development.

Work Experience

Software Engineer
Saab Aeronautics 02/2025 - Current

Development, troubleshooting, and maintenance of software for the Gripen fighter. Unit testing, verification, and troubleshooting performed in various simulator environments. The work spans across multiple different environments in different operating systems. The work requires complex understanding of the underlying hardware.

Software Developer
Statistics Sweden / Statistiska Centralbyrån (SCB) 2021 - 2023

Backend .NET developer position. Worked in a team where I developed new features for different .NET web applications. Included work with Rest APIs and version handling with git.

Operator
Octapharma AB 2020

Throughout the whole summer (June to August), I worked at Octapharma AB, a pharmaceutical company in central Stockholm. The main task was to ensure the flow of material to production. This meant taking care of incoming goods that were in a later stage delivered to different departments. Forklift driving was a vital part of the work. Some weeks I changed the department to the transport packing

department, where the work consisted of inspecting and packing the medicine produced at the company. During my work period, I also took a short course in GMP.

Skills

- **Languages:** Swedish (native), English (fluent)
- **Programming Languages:** C# / .NET, Python, Javascript / React.
- **Technologies:** Machine Learning, Databases, APIs, git, SQL, etc.

Projects

- **Personal Portfolio:** Built from scratch in React. www.jonathanerikson.com.
